Summary

Full-stack developer who spent a six-month internship at Blue Matrix (Pvt) Ltd shipping features across three client products in library management, ticket booking, and travel. Works across the stack with React, TypeScript, .NET, and Flutter, with a research side in AI through HippoCortex, a continual learning project built on the Mamba (SSM) architecture. Aiming to grow as an Associate Software Engineer while contributing solid technical skills to a collaborative engineering team.

Experience

Software Engineering Intern – Blue Matrix (Pvt) Ltd, Colombo 03

Jan 2026 – Jul 2026

As a Software Engineering Intern, I contributed to frontend development, backend API development, and UI implementation across multiple real-world web and mobile products in an agile team environment, working with **React**, **TypeScript**, **Redux**, **Flutter**, and **.NET**.

Jaffna Public Library System (JPL) *jpl.bluematrix.lk*

A digital library management system for Jaffna Public Library, used to manage book collections, archives, and administrative operations online.

- Built the admin dashboard frontend using **React**, **TypeScript**, and **Redux**, developing responsive UI components and managing application state.
- Integrated **REST APIs** to support administrative workflows and content management features.

Touch My Event (TME) – Ticket Booking Platform *tme.bluematrix.lk*

An online ticket booking platform for movies and events, covering listings, showtimes, and booking management.

- Built the admin dashboard frontend using **React**, **TypeScript**, and **Redux** for booking and event management features.
- Integrated **REST APIs** to support booking management, and contributed to feature enhancements and bug fixes.

Islander App – Travel Mobile Application

A travel mobile application that brings together all relevant travel details, destinations, places, and related information onto a single platform for users to explore.

- Developed frontend UI screens using **Flutter**, based on Figma designs, for customer-facing modules displaying travel and destination details.
- Worked on backend development using **.NET**, planning and integrating **REST APIs** to serve travel-related data

to the app.

- Collaborated across admin, customer, and mobile layers to align API contracts with app functionality.

Education

University of Kelaniya, BSc. (Hons) in Software Engineering

2023 – Present

- Current GPA: 3.52/4.00 (Undergraduate)
- Domains: Data Science and Machine Learning, Net-Centric Web Application Development, Mobile Computing Applications

Academic-Projects

HippoCortex

Jan 2026 – Present

- Researching and developing a continual learning system that combines a Mamba (State Space Model) backbone with biologically inspired Sharp Wave Ripple generative replay and a null-space gradient projector to mitigate catastrophic forgetting.
- Responsible for evaluation metrics implementation, benchmark experiments on Split-CIFAR100, ablation studies, and results analysis.
- **Tools Used:** Python, PyTorch, Mamba (SSM)

Fuel Management System *GitHub Repo*

Dec 2024 – Feb 2025

- Collaborated on a cross-platform fuel tracking and quota management system with secure log-in, station dashboard, and notifications, and also developed a mobile app.
- **Tools Used:** React.js, React Native, Spring Boot, JWT, MySQL

Skills

- **Programming Languages:** JavaScript, Java, C, TypeScript, C#, Dart
- **Frontend:** HTML, CSS, Tailwind CSS, React.js, React Native, Flutter
- **Backend:** Spring Boot, Node.js, Express.js, .NET
- **Databases:** MySQL, MongoDB, PostgreSQL
- **Cloud & Storage:** AWS
- **Version Control:** Git (GitHub)
- **Tools and Platforms:** Postman, Figma, Jira, Power BI
- **Other Technologies:** MERN Stack, REST APIs, JWT, JSON, Axios
- **IoT and Embedded Systems:** Arduino, Sensor Interfacing, Hardware-Software Integration, Basic Embedded Systems, IoT Concepts
