EMPLOYMENT HISTORY

Automation Engineer, 2016–present

Request Technology

- Developed, executed, and maintained QA test automation for build, deploy, functional, regression, load, and performance testing.
- Ensured all developed code was stored in accordance with team change control procedures.
- Performed unit and module testing of automation to find errors and confirm test systems meet specifications.
- Partnered with software development, business analysts, and the QA team to identify the components of the system to be automated based on both business priority and benefit of automated testing.
-

Automation Engineer, 2014–2016

CDM Smith

- Worked with project managers, technical business analysts, and developers to define, document, and maintain required automated testing.
- Automated test development progress, reduction of test execution time, increase in test coverage, improvements to test accuracy and repeatability, and maintenance costs associated with new releases and requirements changes.
- Executed and developed regression tests through entire release cycle.
