

SUPUNTHILA LAKSHAN

SOFTWARE ENGINEER

Matara, Sri Lanka | supunlakshan397@gmail.com | +94 70 43 51 999 | [github/LSLakshan](#) | [in/IsLakshan](#)

SUMMARY

Highly motivated final-year BICT (Hons) undergraduate at the University of Ruhuna, specializing in full-stack and mobile application development. Equipped with strong technical skills in Flutter, Dart, the MERN stack, Java (Spring Boot), and Docker. Experienced in building scalable web applications and state-managed, cross-platform mobile solutions utilizing Clean Architecture. A strong team player eager to apply problem-solving skills in a professional environment as a Software Engineering / Mobile Development Intern.

EDUCATION

Bachelor of Information and Communication Technology
University of Ruhuna

GCE A/L - 2020
MR/Narandeniya National College, Matara - 3B in Technology Stream.

TECHNICAL SKILLS

Programming Languages

HTML, CSS, Java, SQL, Dart, JavaScript

Libraries & Frameworks

React, Spring Boot, Flutter, Node.js

Web Stacks

MERN Stack

Databases

MySQL, MongoDB, SQLite

Tools & APIs

Git, GitHub, Docker, REST APIs, Riverpod

ACHIEVEMENTS & CERTIFICATIONS

1st Runner-Up - Hacktrail 2.0

- Organized by ICT Student's Circle, Faculty of Technology, University of Ruhuna | Aug 2025

GitHub Foundations Certified

- Issued by GitHub | Jun 2025
- Demonstrates proficiency in Git, GitHub workflows, version control, and collaborative development practices.

[Verify Credential](#)

PROJECTS

Personal Finance and Budget Tracking Application | [GitHub](#)

- Developed a robust full-stack web application integrating a Spring Boot RESTful API backend with a dynamic React frontend.
- Designed and implemented a MySQL database architecture to securely store user financial data, transactions, and categories.
- Dockerized the entire application ecosystem (Frontend, Backend, and MySQL) using Dockerfile and docker-compose for streamlined deployment and consistent development environments.
- Implemented core features for tracking daily expenses, managing income sources, and categorizing transactions for better financial monitoring.
- **Tools and Technologies:** Java, Spring Boot, React.js, MySQL, Docker, Maven, Vite

Smart Campus Operations System - Mobile Application | [GitHub](#)

- Developed a comprehensive mobile application utilizing Flutter and Clean Architecture for efficient university campus operations management.
- Implemented role-based authentication and a REST API-driven announcements feed to deliver real-time updates to students and staff.
- Integrated an interactive campus map using OpenStreetMap and built an automated event registration system utilizing QR code generation and mobile scanning capabilities.
- **Tools and Technologies:** Flutter, Dart, SQLite, Riverpod, REST APIs, OpenStreetMap, QR Code Scanning

Hotel System – Booking & Management Platform | [GitHub](#)

- Developed a full-stack hotel management system with real-time booking and notifications using Socket.io.
- Implemented secure authentication (JWT, RBAC) and automated workflows for bookings and email notifications.
- Built scalable frontend and backend using React, Node.js, and MongoDB for managing rooms, events, and reservations.
- **Tools and Technologies:** React.js, Node.js, Express.js, MongoDB, Socket.io, Tailwind CSS, Material UI, JWT

Library Management System – Full-Stack Web Application with Advanced Database Automation | [GitHub](#)

- Developed a full-stack Library Management System using React, Node.js, and MySQL.
- Implemented book management, member handling, and issue/return system with automated fine calculation.
- Utilized advanced database features like stored procedures, triggers, and scheduled events for automation.
- **Tools and Technologies:** React.js, Node.js, Express.js, MySQL, Tailwind CSS, JWT

Smart Canteen Food Ordering System | [GitHub](#)

- Spearheaded a full-stack canteen ordering system with cart functionality using React and Express (1st Runner-Up at Hacktrail 2.0 Hackathon).
- Implemented secure user authentication, an interactive dashboard, and a "Daily Meal Customizer" feature.
- Enhanced overall UX with loading states, snackbar notifications, and real-time UI updates for menu management.
- **Tools and Technologies:** React.js, Node.js, Express.js, MongoDB
